

Latinizacija! Q: Kazakh keyboard with automatic romanisation.

Double-click the program icon.

(Program works if a Cyrillic keyboard – physical or virtual – is the active one.)

Program is (de)activated if you type **Windows + t** (*cyrillic t* for transcription)

Please e-mail me if you have questions / want to correct a mistake: **bernd.kappenberg@gmx.de**

Sorry, only for Windows (at this point).

(default) **Windows + (** Spelling 2017; Russian letters (not covered in the Presidential decree) taken over from QazAqparat

**Windows + ** Spelling QazAqparat (pre-2017)

Kazak Grammar

I do not know where Ë is on the physical keyboard, but it is covered.

The "№" button is also the "correcting button", for example when you need to write a word in capitals (Ya + № → YA) or in case you really need NG instead of default N' (in the spelling 2017).
